COM S/SE 319 : Construction of User Interfaces

Fall 2021

Group No. 12: Final Release Report

Project Title: CaCyno

1. Successful Implemented Story Cards for Demo 2:

- Story card 194:
    - Name of story card: Roulette Logic
    - Assigned team member: Joshua Lawrinenko
    - Task accomplished for story card:
        - Checks funds
        - Plays game
        - Checks funds after play and makes decision
            - If no more funds, return home
            - Else, play again
        - Selenium test included

- Story card 833:
    - Name of story card: Roulette UI Completed
    - Assigned team member: Joshua Lawrinenko
    - Task accomplished for story card:
        - Works
        - Nice design
        - Responsive

- Story card 790:
    - Name of story card: Slot machine buttons and jackpot
    - Assigned team member: Youwon Song
    - Task accomplished for story card:
        - Good design
        - Works
        - Good image

- Story card 1074:
    - Name of story card: winner function for slot machine
    - Assigned team member: Youwon Song
    - Task accomplished for story card:
        - Winner
        - Set money for jackpot
        - Pick jackpot img

- Story card 839:
    - Name of story card: Settings Popopus and Selenium Tests
    - Assigned team member: Thomas Huynh
    - Task accomplished for story card:
        - User can:
            - Submit a change to username
            - Submit a change to password
            - Add funds
            - Submit bug reports
        - Testing will test:
            - Username match
            - Username don't match
            - Password match
            - Password don't match

- Story card 1075:
    - Name of story card: Jackpot Img visibility for slot machine
    - Assigned team member: Youwon Song
    - Task accomplished for story card:
        - Visible img
        - invisible(hidden) img
        - Set position of img

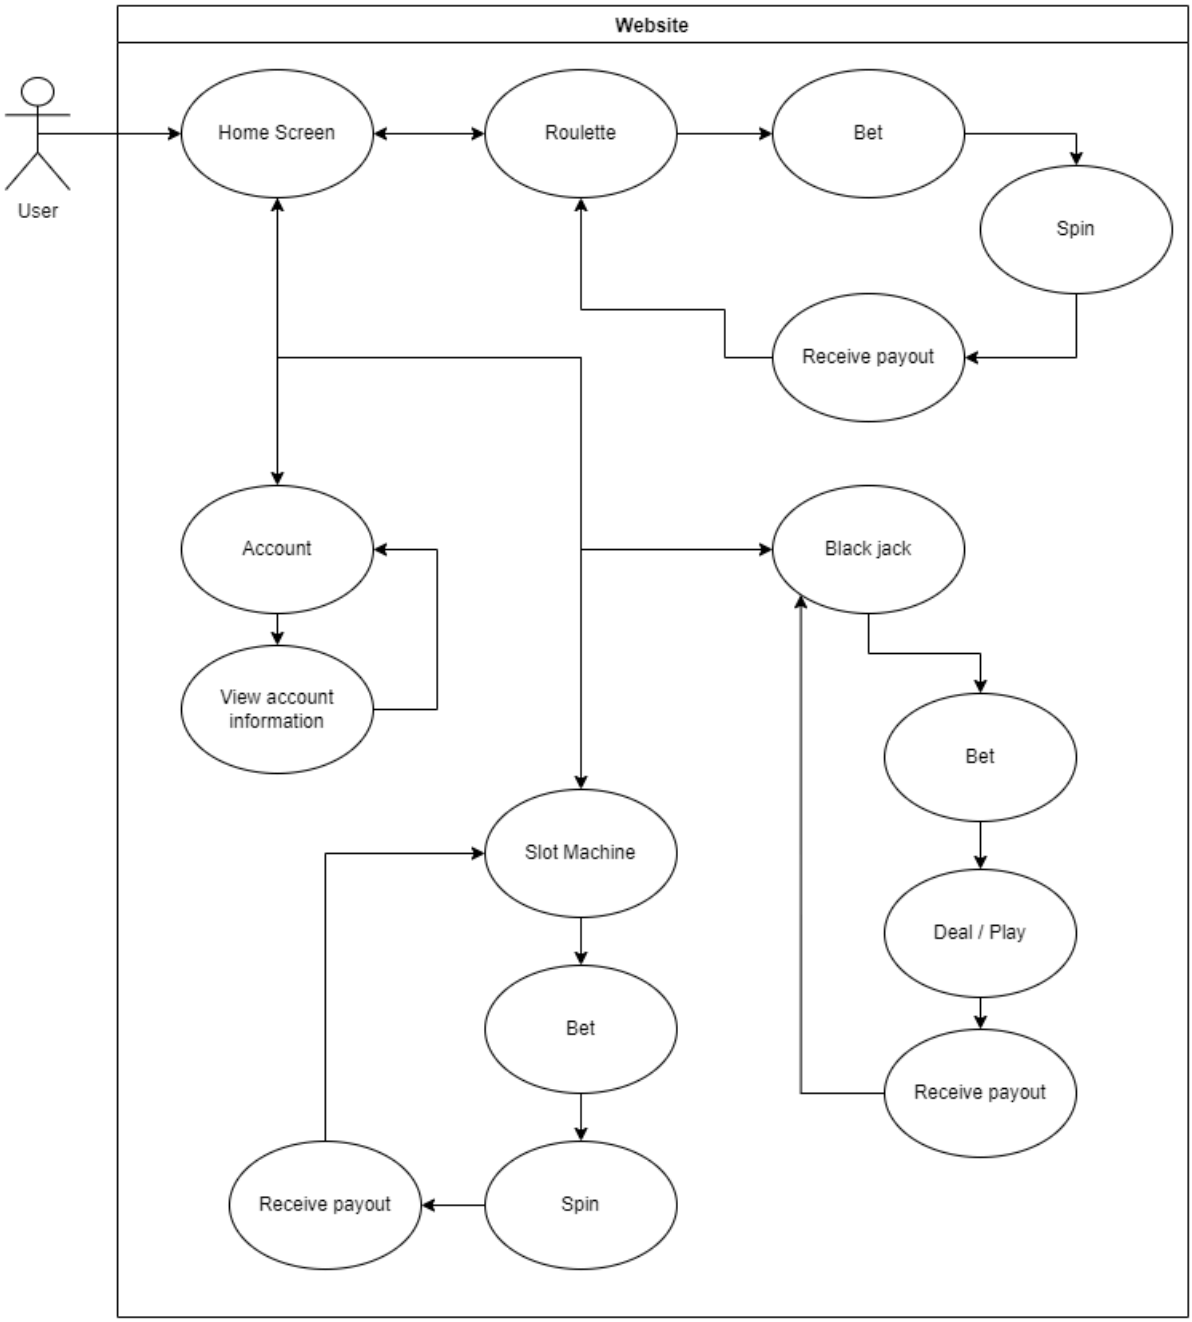
- Story card 875:
    - Name of story card: Create UI for BlackJack
    - Assigned team member:Bhuwan Bhaskar Joshi
    - Task accomplished for story card:
        - Moved the whole Project to react
        - App CSS and extra UI functionality for blackjack
        - Improved the Logic for BlackJack.

- Story card 724:
    - Name of story card: Black Jack Basics
    - Assigned team member: Bhuwan Joshi
    - Task accomplished for story card:
        - Created a blackjack game from scratch in React

        - Created Custom Javascript logics and integrated Images into the playing cards
        - Worked on the UI and CSS

- Story card 1087:
    - Name of story card: Write Selenium Tests
    - Assigned team member: Bhuwan Joshi
    - Task accomplished for story card:
        - Wrote Selenium tests for BlackJack
        - Tested the buttons for placing the Bets
        - Tested the Logic for incrementing the money that is earned by the player

2. Design Documentation (UML Diagram for Story Cards of 2nd Release Only):



(Figure A: use-case diagram of a user on website)

3. UI description with Screenshots:

- Story card 194: Roulette Logic
    - Roulette wheel spins.
    - Ability for the user to bet (does not save).
    - Missing backend integration, did not have time to implement.
    - Picture not available, JavaScript based story card.
- Story card 833: Roulette UI Completed
    - Functional UI design.
    - Users can interact with controls.
    - 
(Figure 1: as a user, you want to play a round of roulette)

- Story card 839: Settings Popopus and Selenium Tests
    - User can submit a password and username change that checks if inputs match
    - User can submit form
    - NOTE: Backend was not implemented, so it is purely UI that mimics a real webpage
    - Selenium tests runs 4 tests:
        - Usernames match
        - Usernames don't match
        - Passwords match
        - Passwords don't match
        - NOTE: can't get picture of Selenium tests running because it is very fast
            - Also not sure if exported from Eclipse to GitHub correctly
    - 
(Figure 2: Non-matching username, matching not included because if matched and clicked submit, the window should just close)

- 
(Figure 3: Non-matching passwords)

- 
(Figure 4: Passing Selenium tests on Eclipse)

- Story card 790: Slot machine buttons and jackpot
  - User can click and run spin button
  - User can click and run reset button

- 
- (When reset)

-

- (When spin)

- Story card 1074: winner function for slot machine
    - Winner function for slot machine player
    - Jackpot img show up
    -

    - Winner function

- Story card 1075: Jackpot Img visibility for slot machine
    - Make it invisible(Not winner)
    - Make it visible(Winner)
    - 
    - (invisible)

-
Slots
Home
Account
SPIN
RESET
BALANCE : $999.0
TYPE OF EMOJI
JACKPOT

- (visible)

- Story card 875: Create UI for BlackJack
    - Moved the Project to react
    - Created a UI
    - 
- 
(Project in react)

- Story card 1087: Write Selenium Tests
  - Wrote Selenium Test to check the chip buttons

    The selenium Test:

    Clicks on a Chip

    Clicks on another Chip

    Compaes the incremented Values

```java
@Test
public void checkChipValues()
{System.setProperty("webdriver.chrome.driver","src/chromedriver");
    WebDriver driver = new ChromeDriver();
//      URL resource = getClass().getResource("http://localhost:3000/");
    driver.get("http://localhost:3000/");

    WebElement webElement = driver.findElement(By.xpath(
            "/html/body/div/div/div[3]/section/div/img[1]"
    ));
    WebElement webElement2 = driver.findElement(By.xpath(
            "/html/body/div/div/div[3]/section/div/img[2]"
    ));
    WebElement webElement3 = driver.findElement(By.xpath(
            "/html/body/div/div/div[3]/section/div/img[3]"
    ));
    webElement.click();
    webElement2.click();
    webElement3.click();
    WebElement webElement4 = driver.findElement(By.xpath("/html/body/div/div/header/div/p/div"));
    Assert.assertEquals(webElement4.getText(), actual: "130");
```

- The Second Selenium test, check if the start be button is functioning along with incremented values
- The Test:

  Clicks the chips to test the bet

  Clicks on the place bet button and checks if the next bet is chipcount - the values selected

```java
@Test
public void TestBet()
{System.setProperty("webdriver.chrome.driver","src/chromedriver");
    WebDriver driver = new ChromeDriver();
    //     URL resource = getClass().getResource("http://localhost:3000/");
    driver.get("http://localhost:3000/");

    WebElement webEle = driver.findElement(By.xpath(
            "/html/body/div/div/div[3]/section/div/img[5]"
    ));
    webEle.click();

    WebElement webElement = driver.findElement(By.xpath(
            "/html/body/div/div/div[3]/button[1]"
    ));
    WebElement webElement2 = driver.findElement(By.xpath(
            "/html/body/div/div/div[3]/button[2]"
    ));
    WebElement webElement3 = driver.findElement(By.xpath(
            "/html/body/div/div/header/p[2]/div"
    ));
    webElement.click();
    webElement2.click();
   // webElement3.click();
    WebElement webElement4 = driver.findElement(By.xpath("/html/body/div/div/header/div/p/div"));
    Assert.assertEquals(webElement3.getText(), actual: "0");
```

4. Testing:

- Story cards 194 and 833 were tested together using Selenium with Chrome Webdriver. This provided the software required for automated tests that ensure functionality is in place and new features do not break existing features. Due to the random nature of roulette, however, thorough testing could not be repeatedly done. So, Selenium was set up to only check for changes in values to make sure components were working.
- Story card 839 was tested using Selenium with Chrome Webdriver. It automatically opens the page and inputs for four scenarios. The scenarios were matching/non-matching usernames and matching/non-matching passwords.
- Story Card was tested using Selenium with Chrome Webdriver. It opens up blackjack and Tests if the Betting chip buttons and the Bettings Values are functioning as expected.
